Abstract (en)

[origin: WO9621014A2] Methods are provided for obtaining measurable levels of a protein, nucleic acid molecule, or enzymatic product in a bodily fluid of cells of a human, comprising the step of administering human a recombinant retroviral preparation having a titer on HT1080 cells of greater than 10<5> cfu/ml, wherein the recombinant retroviral preparation is capable of directing the expression of a protein, nucleic acid molecule, or enzyme which generates an enzymatic product, such that measurable levels of the protein, nucleic acid molecule, or enzymatic product may be obtained in the bodily fluid of cells of the human.
