Abstract (en)

[origin: WO9617134A1] The present invention provides for a method and apparatus for supporting vegetative growth on a slope face in which a first layer member (12) can be provided for extending over at least part of the slope, a second layer member (14) can be provided for extending in front of said first layer member (12) and arranged to be spaced therefrom and to define a region (26) therebetween for receiving growing medium and wherein connection means (16) are providing for connecting said first (12) and second (14) layer members together in a manner which allows for the support of the growing medium, and any vegetative growth associated therewith, without prejudicing the mechanical stability and strength of the apparatus.
