Abstract (en)
[origin: DE4443564A1] In a holder for the door control switch (3) of a motor vehicle, the door control switch (3) is fixed in a hoop (11) associated to the door lock and secured to the door spar (12). A rotor (11) of the door lock engages from behind a closure bolt (16) arranged on the hoop (1). In order to easily mount and dismount the door control switch (3) on the hoop (1), the door control switch (3) is an exchangeable unit set in such a way into the hoop (1) that it is not necessary to remove the closure bolt (16) when exchanging the door control switch (3).
