Abstract (en)
A device for mixing a carrier liquid with one or more additives comprising a closed housing with an inlet and an outlet opening for the liquid and an infeed port for the or each additive in addition to a mixing gear accommodated therein, wherein the mixing gear is formed by at least one rotatingly driven blade assembly, the rotation shaft of which is received centrally in the cross sectionally non-round housing, wherein the mixing gear exerts a pushing action on the liquid in the direction toward the inlet opening, whereby due to a vigorous shearing action between the generated liquid flows the or each additive is intensively mixed. <IMAGE>
