Abstract (en)
[origin: EP0796797A2] The packing cushion comprises cushion elements (31; 13, 23) connected to each other and variable relative to each other against spring-elastic return force. The cushion is made from at least one cutout (1, 2) of corrugated paper or similar, with at least two U-shaped wall sectors (10, 20) formed by web and shoulder sectors. The web sectors (11, 21) are connected by corner sectors (12, 22) to the outer shoulder sectors (13, 23), which are connecting sectors. By means of them, the wall sectors are connected firmly to each other. The cushion elements are thus connected to each other.
