Abstract (en)
[origin: EP0796953A2] The device has a distributor pipe (28), which contains a fitting, e.g. a filter (26), and is connected to a mains supply pipe (32). The axis of distributor pipe and mains supply pipe are parallel offset relative to each other. The pipes are connected via the fitting. The fitting has an intake, positioned concentrically to the outlet. The intake is connected to the side of the mains supply pipe, and the outlet is connected to the side of the distributor pipe via a double-T-section. This is integrated in the fitting with two additional parallel offset connections.
