Abstract (en)

The invention relates to an assembly for forming a roof, which assembly comprises at least two spaced-apart girders (3) extending parallel to each other as well as roof elements (4) which are only supported on said girders (3). The roof element comprises two metal sheets extending parallel to each other, with a layer (7) of hard foam plastic material, for example polystyrene, present therebetween. The roof element can be mechanically coupled, on longitudinal sides extending between said girders, to an adjacent roof element. <IMAGE>
