Abstract (en)

Terminal blocks of a type mounted on to a rail are positioned side by side and are interconnected with the use of inserted bridging connectors (9). The connectors have a comb like shape which can have different numbers of contact teeth and are produced as metal pressings. Each of the terminal blocks has a contact plate with a rectangular hole that receives the end of a bridging connector contact tooth. Each of the contact teeth have a flat blade section (2) and a second blade at right angles (3) that provides spring contact pressure.

Abstract (de)

Der Querverbinder für Reihenklemmen lässt sich gegenüber den bekannten Ausführungen wesentlich kostengünstiger herstellen. Hierzu verläuft der einstückig an eine Kontaktfeder angeschlossene Kontaktstift rechtwinklig zur Kontaktfeder, die zweckmäßigerverweise als Blattfeder geformt ist. Die Federkräfte der Kontaktfeder sind nach der Klemmkontaktierung parallel zur Längsrichtung der Stromschiene gerichtet. <IMAGE>
