Abstract (en)

A pushbutton unit (30), of flush-mounted or wall-resting type, in particular for external stations of intercom and/or video-intercom systems, comprising a front plate (10) in which a window (20) is provided through which cards (22) identifying the internal extension (P) are visible, and follow each other one by one. For this purpose a rotary drum (25) carrying the cards (22) in positions adjacent to each other is rigidly connected via a pin (26) to an electrical change-over switch (27) and to a knurled or toothed disc (28) having its knurling (29) or teeth projecting outwards from the plate (10), so that the caller by acting on them causes the names or numbers to pass one at a time in front of the viewing window (20) until the required name or number arrives. Only one call button (31) is provided, plus a single light source (33) inside the drum (25), for identifying the name or number.
