Abstract (en)  
[origin: WO9717251A1] The invention concerns a life-raft with a passenger compartment, the life-raft being formed by an inflatable floating body comprising at least two superimposed tubular air chambers as side walls and a base whose outer periphery is connected on all sides to the floating body. Formed at least in the uppermost air chamber (2) is an aperture (8) which extends to the top of the air chamber (3) lying therebelow. This aperture (8) can be closed by an apron-like flap (9) mounted at the regions (10) of the air chambers (2, 3) adjacent the aperture (8). In the open position, the flap (9) acts as a slide facing away from the life-raft (1).
