Abstract (en)
[origin: WO9618716A1] Liquid detergent composition comprising a polymeric hydrotrope. The polymer has at least one of the following effects, i.e. dispersion improvement, dissolution improvement and dispensing improvement to (at least partially) overcome gelling problems, in particular at low water levels. Preferably, the composition further comprises electrolyte material. The invention further relates to a surfactant containing composition with polymeric hydrotrope and to a method of preparing a non-aqueous detergent composition, to a method of applying a composition and to a method of mixing a composition with water.
