Abstract (en)

[origin: DE19538485A1] The individual door and/or wall components in the area near the floor are not guided and have a base profile. In the base profile (3) a locking device is provided which by contact between at least two door and/or wall components locks them to one another and in the floor. On one side of the base profile, a ram (11) and a locking device are available, the locking device being releasable by the ram. The locking device consists of a bolt (21), which can be pressed into a socket (25) in the floor. The operation of the locking bolt is effected indirectly. A lever system comprising at least two rotatable levers (15,16) is provided on the locking bolt.
