Abstract (en)  
[origin: EP0798253A1] The auxiliary stack frame (13) can be lowered and is positioned between two side walls of the sheet-delivery. The auxiliary stack frame attached at the corners (28) to lifting pieces (36) has a movable auxiliary stack holder element (19). The length of the auxiliary stack frame in the direction in which the paper travels (42) corresponds to double the length of the auxiliary stack holder element. A movable auxiliary stack base (23) fits into the auxiliary stack holder element which has a transverse bar (22) to which a rake (23) and suspended table are fixed. The front cross-bar (16) of the frame has holder fingers.
