Abstract (en)

[origin: EP0798427A2] The fixture system comprises a spacer (4) used with two positioning plates, which are arranged in line with a specific distribution over the height and the length of the plate. One of the plates (5) has equally shaped formations (7) of a certain width (t) arranged in row (8) over the length or height (h) of the plate. The other plate (6) has a row (9) running over its length or height of openings (10) matching the formations of the first plate. The formations of the one plate can be inserted through the openings in the other plate in different positions for adjustment of the height or length of the spacer. A fastening screw (11) with a bolt passes through an opening (12) between the formations and the surface of the second plate.
