Abstract (en)

[origin: WO9619630A1] A latch-operable multi-bolt lock comprises a nut (8) and a single-armed lever (9, 9') connected thereto via a catch (10). In the lever (9, 9') there is a radial slot (17) in which is fitted a slide (18) bearing a cylindrical pin (13). The pin (13) engages in a drilling (20) in a push-rod connector (21) by means of which a pivoting movement of the lever (9, 9') is converted into a linear movement of the push-rods (2, 3).
