Abstract (en)
[origin: WO9620388A1] An environmentally friendly artificial target, in particular for clay pigeon shooting, made of a binder-agglomerated divided material and remarkable in that the binder includes an aliphatic hydrocarbon material with a melting point of 50-150 DEG C, and an additive enhancing the impact brittleness of the target and including a thermoplastic resin. In particular, the additive is selected from rosin or esterified or hydrogenated derivatives thereof, or optionally modified petroleum resins. A method for making such artificial targets is also disclosed.
