Abstract (en)

[origin: EP0799915A2] The control action for a card gives a non-linear run of the ratios between the rotary speeds of the feed roller and the doffer during at least a transient phase. Also claimed is a card assembly with a control (4) to give a non-linear run of the ratios between the rotary speeds of the feed roller (6A) and the doffer (70), at least during a transient phase.
