Abstract (en)
The beam comprises right-angled cuboids (4) which are glued together, and which are each formed from two right angled triangular segments which are also glued together. The segments are formed by making radial cuts into a tree trunk. The cuboids are glued together so that the growth rings in the grain of the wood extend in a roughly longitudinal direction of the beam. The trunk may first be moulded into the shape of an octagon, before the radial cuts are made. Both longitudinal sides of the triangular segments may also be in the radial direction.

Abstract (de)
Balken aus aufeinander verleimten rechtwinkligen Quadern, die jeweils aus zwei rechtwinkligen, miteinander verleimten Dreieckslamellen aus radialen Ausschnitten aus einem Holzstamm gebildet sind, wobei die Quadern derart aufeinander verleimt sind, daß sich die stehenden Jahresringe im wesentlichen in Längsrichtung des Balkens erstrecken. <IMAGE>
