Abstract (en)  
[origin: WO9716998A1] The chair proposed has a rigid side frame (1, 101) and a stable bottom frame (3, 103) in which is mounted a seat (2, 102) which can move when the chair is occupied, the seat representing an improvement over Swiss patent CH 67 9444 in preventing deformation sideways and downwards. The bottom frame (3, 103) gives the chair the necessary stability. The oval, square or round seat (2, 102, 202) is filled with air or a similar material and held by the side frame (3, 103).
