Abstract (en)  
[origin: EP0800812A1] The equipment consists of a hollow bell (11), open at the bottom and having at least one inner partition (16) which extends as far as the lower edge of the bell and forms separate compartments (20.1, 20.2) inside it which are connected to a differential vacuum pump (25). The bell's inner compartments are of different sizes, with the first compartment in the direction of the bell's movement being substantially smaller than the second one. The bell is made from a transparent material such as glass or a suitable plastics so that the effects of the vacuum massage are immediately visible, and the vacuum in each of its compartments is adjustable individually.
