Abstract (en)  
[origin: EP0801153A1] The method concerns electrolytic treatment of continuous products, according to which the product is transported through the electrolyte liquid and an electric potential is imposed on it. The potential difference imposed on the product is measured and an opposing potential is applied in such a way there is no potential difference on the product at its entry into and/or exit from the installation. Also claimed is an installation for implementation of the proposed method.
