Abstract (en)  
[origin: EP0801184A2] The snow holder (4) has a movable part (10), which is fitted in an opening (9) of the holding stirrup (3) and is bent downwards at one end of the snow retention part (11), serving as locating part (15) at its other end. The holding stirrup has a first part (6) for location under the end (1) of an upper tile (5), a second part (7) inclined to the first part with an opening, a third part (8) vertical to the first part and a fourth part (25) bent upwards to the second part. The fourth part is bent at an acute angle from the second part somewhat in the direction to the third part. The fourth part engages with a toothed (16) area of the movable part and prevents slippage of the stirrup. The snow retention part is bent downwards parallel to the third part and is also bent into an end projection (12).
