Abstract (en)

[origin: EP0801185A2] The securing members (26) prevent the drop bar (14) in its lower end position moving in the inward direction. The guide components (18) are formed as wire cables or spokes, which extend as far as beneath the lower end position of the drop bar. Hollow components (22) are fixed at the ends (16) of the drop bar. They encompass the guide components and with their lower ends (24) in the lower end position of the drop bar work in conjunction with the securing members. At the lower ends of the hollow components, plate or disc-shaped widened formations are provided, which work in conjunction with the securing members. The hollow components are hoses, casings or tubes.
