Abstract (en)
[origin: EP0801187A1] The joint cover comprises an elongated strip section (2) having a visible external surface and an internal surface (4). Two longitudinal parallel ribs (5,6) project from the internal surface. The edges (7,8) which extend towards each other from each rib form a gap of predetermined width (D). A longitudinal groove (9) defined between the section internal surface, the longitudinal ribs and the edges has a longitudinal opening along the gap. The strip section is fixed to a surface by fixings (3). Each fixing comprises a head (10) which can be introduced independently in the section longitudinal groove. The head positions a rod (11) provided at the end of a ball joint (12) which, when the head is housed in the groove, passes through the groove longitudinal opening with the ball joint located outside the section.
