Abstract (en)

[origin: EP0801200A2] A device for controlling the opening of a door pivotally mounted on one side, in particular a door for the object containing compartment of a motor vehicle passenger's cabin, consists of a bellows (4) of elastomeric material provided with a valve (12) for controlling the inlet and outlet of air to and from its inside. The bellows has one end connected to the body (3) forming the object containing compartment (2), while the other end is connected to the end of the door (1) opposite to its other pivotally mounted end (7). <IMAGE>
