Abstract (en)
The luminaire has a housing (1) of C-shaped cross-section in which laterally of the light-emission window (5) channel-shaped spaces (6) are present. Circuitry (10) for operating a lamp (1) is accommodated in a channel-shaped metal holder (13), which has a bottom (13), walls (14) and transitional portions (15) connecting these, which are at an angle to the bottom (13) as well as to the walls (14). A bracket is fixed to the holder (11) in a clamping manner in that the transitional portions (15) are held in respective incisions (22,23) in the bracket. The bracket (20) allows for mounting the circuitry (10) in a channel-shaped space (6) of the housing (1), while nevertheless the connection (21) of the holder (11) to the housing (1), laterally of the holder (11), can be made and is accessible through the light emission window (5) of the housing (1). <IMAGE>
