Abstract (en)
[origin: DE4414609A1] The invention concerns an arrangement for controlling a consumer (100), in particular an electromagnetic consumer. The arrangement comprises means (120) for detecting the current flowing through the consumer and a control means (110) which is connected in series with the consumer and which can be controlled independently of the current flowing through said consumer. Furthermore, a switching means (140) is arranged in parallel with the control means (110).
