Abstract (en)
[origin: DE19521972A1] The invention concerns a process for manufacturing a cap strip (4) for discharge lamps, whereby a carrier strip (1) is coated with at least one substance destined for introduction into the discharge lamp, in particular a mercury alloy (2) and/or getter substance (3). According to the invention, a section (5) is detached from the carrier strip (1) at right angles to the strip's length. The section forms the discharge lamp cap strip (4) and is coated over its entire width (bt) with the substance(s) in question.
