Abstract (en)
[origin: EP0802375A1] The method involves using a layer (3) of adhesive placed by screen printing on at least one face of the glass (1) to all the required areas. The glazing pane can be covered over all its face having the adhesive, after placing of the latter and prior to its fixing to a support, by a protective film of siliconised paper or other release material. There can be two layers of adhesive material on the two faces of the glass pane. The adhesive material forming the layer can be acrylic based and placed by a brush or roller.
