Abstract (en)

This invention provides a silver halide colour photographic material comprising at least three emulsion layers and at least one intermediate layer situated between two of the emulsion layers, wherein this intermediate layer comprises both a colourless coupling compound, containing a pyrazole ring in its chemical structure and a scavenger for oxidized developer, being a diffusion-resistant hydroxybenzene derivative. A method for producing a multi-colour filter for use in LCDs, using a colour photographic material according to this invention, is also provided.
