Abstract (en)

[origin: EP0802586A2] The holder has an electrically insulating holder body (1) with a guide slot for the contact pins accessible from the front of the body and at least two spring contact elements mounted in the body so as to ensure reliable contacts. Each spring contact element has a contact region protruding into the guide slot for the contact pin. The holder body is made in one piece and has slot-shaped recesses (26a) for contact-ensuring receipt of the contact elements (15). The contact elements are latched in or held by the recesses which are essentially open to the front (2) and/or back of the holder body.
