Abstract (en)
[origin: WO9717757A1] A surface acoustic wave converter which is suitable for anisotropic piezoelectric substrates having the NSPUDT characteristic. The converter is provided with a converter structure having an exciting electrode structure (21) and a reflector structure (22) formed on an anisotropic piezoelectric substrate that is so cut that the substrate has an NSPUDT characteristic. The structure (21) is provided with a positive electrode (23) having a plurality of electrode fingers arranged at a pitch λ (λ is the wavelength of the basic surface acoustic wave) and a negative electrode (24) having an electrode finger between the electrode fingers of the positive electrode in such a way that the center-to-center distances between the fingers is $\lambda/2$. The reflector structure (22) has a plurality of electrode fingers so arranged that the center-to-center distances between the fingers are $\lambda/2$. The distance L_g between the structures (21 and 22) is $L_g = (2n+1) \lambda/4$ (n is a positive integer).
