Abstract (en)

[origin: WO9602145A1] An animal carcass support frame for holding and positioning an animal carcass during operations thereon suspends the carcass in an inverted position from the front and rear hocks of the carcass. The frame comprises means to raise and/or lower the front and rear parts of the carcass. A dressing system is described comprising the frame and an industrial robot comprising a robotic arm equipped with a cutting tool for dressing the carcass and programmed to carry out dressing operations on the carcass. Also disclosed is a cutting tool for equipping to a robotic arm of an industrial robot, to be manipulated by the robot.
