Abstract (en)  
[origin: WO9621368A1] The invention relates to a fully modular and evolutive transformable garment obtained by a combination amongst multiple combinations of a plurality of instantaneously removable modules (1-17) of which the lower part (trousers, skirt or the like) is metamorphosable. According to the invention, the modules (1-17) are interchangeable, substantially complementary by degrees, composite, irregular and optionally heterogeneous. Each module is made lying flat, generally shaped and costumized, and comprises at least on each of the edges to be assembled a means for rapidly fixing the edges to each other. The modules are comprised of a plurality of basic modules (7, 9, 11, 12) and of a plurality of complementary modules (1, 2, ...). Each module may be cut in any way as to the material used so that it can be adapted to other modules. Preferably, each module is polyvalent.
