Abstract (en)
[origin: DE19500968A1] The invention concerns a method of printing on material with UV-hardened printing ink in a printing machine using the indirect letterpress or relief printing process. To that end, it is proposed that a cationically polymerising printing ink should be used. The invention also concerns: an UV-hardened printing ink which can be used advantageously in particular in the proposed process, its particular characteristics being low solvent content, low viscosity and low tackiness; and a method of producing the printing ink by vacuum distillation.
