Abstract (en)
[origin: WO9701007A1] An insulating construction block includes a pair of generally parallel panels or side walls (10, 12). Side walls (10, 12) are joined together by webs (14). Interconnection means (16) are provided on the top and bottom edges of the side walls (10, 12). The interconnection means (16) permit the stacking and interconnection of a plurality of like blocks as would be required in the construction of a wall or similar arrangement. The interconnection means (16) include a plurality of projections (18) and recesses (20) arranged in an alternating pattern; the projections (18) and recesses (20) being of substantially the same shape and having substantially the same dimensions. The interconnection means (16) on the top and bottom edges of the side walls (10, 12) are substantially symmetrical, thereby permitting the interconnection of like blocks in a bi-directional and/or reversible manner.
