Abstract (en)

[origin: JPH1080874A] PROBLEM TO BE SOLVED: To improve a pressing-out device so as to use it universally quick- responding to the condition in each occasion regardless of a using condition in order to extrude a joint pin formed in various different forms, as well as to reduce the manufacturing cost. SOLUTION: An adjusting member consists of an adjusting spindle 5, the adjusting spindle 5 has a turning pin 9 extending in the lateral direction orthogonal to the regulating spindle at its one side end 7, and plural supporting levers 2 furnishing acceptant elements 24 which are formed in different forms are provided. The supporting lever 2 can be connected rotatively to the turning pin 9 selectively and interchangeably.
