Abstract (en)

[origin: EP0803615A2] Device to be connected to a chuck (7) at the end of the knuckle boom set (1) of a working vehicle, said knuckle boom set comprising several boom arms (5, 6) successively connected to each other with joints permitting them to be turned in relation to each other by power means (2, 3, 4), said chuck being so pivoted on the outermost boom arm (6) of the knuckle boom set that it is able to turn about a horizontal pivoted axle (8), which device comprises a mounting frame (9) provided with mounting elements (10) to allow it to be attached to the chuck (7). The device comprises an elongated telescopic jib (11) with an adjustable extension length, which is connected to the mounting frame (9); an implement (12) pivoted on the end of the jib; and a first power means (13), such as a hydraulic cylinder, arranged between the jib and the implement to turn the implement with respect to the jib. <IMAGE>
