Abstract (en)
[origin: EP0803624A1] The espagnolette bolt (20) comprises a rod mounted to translate in a casing housing the translation control mechanism. The rod slides in a groove (21) between locked and unlocked positions. The groove has a bottom groove (22) and a groove (23) flush with the edge which has a transverse width greater than the bottom groove. The T section rod extends along the groove longitudinal axis. The head (10a) and the leg (10b) forming the T slide respectively in the groove flush with the edge and in the bottom groove. The head is interrupted in front of the rod free end and is extended to the rod end by an end portion of width equal to the width of the T leg.
