Abstract (en)
[origin: EP0803783A1] Image-forming element comprising a hollow cylindrical drum body (10), a plurality of circumferentially extending electrodes (14) formed on the outer circumferential surface of the drum body (12), a control unit (16) disposed inside of the drum body (12), and contact means (22) for electrically connecting each of the electrodes (14) individually to the control unit (16). The contact means are arranged in a plurality of rows extending in the axial direction of the body (12) and each of the contact means (22), when considered from the inner side of the wall of body (12), has a dimension, considered in the axial direction of the body (12), which is at least twice the corresponding dimension of an electrode (14).
