Abstract (en)

[origin: WO9622041A1] The proposed metal locker, which is made from aluminium, steel plate or similar material, is provided on the front locker face (2) with vertical hollow shaped elements (6, 7, 8) which are fixed to side walls (3, 4, 5) of the metal locker and between which a locker door (15) can be fitted. To create a metal locker which is simple and inexpensive to manufacture, takes up little space in transport and can be recycled without difficulty, it is proposed that the outer mantel (9, 10, 11) of each of the hollow shaped elements (6, 7, 8) should be formed from the sheet metal of the side walls (3, 4, 5) by multiple folding by which the inner spaces elements (12, 13, 14) of the shaped elements are substantially defined.
