Abstract (en)

[origin: WO9709911A1] The invention pertains to the field of mechanics, and more precisely to articles for marketing commercial objects. A display device for small containers is described, which supports and advances said containers as they are sold, characterised in that it is formed of an assembly of two movable parallel strips and of a spring pusher member that slides along a horizontal groove intermediate the strips and abuts against the last container in the row between the two strips. The device is useful for displaying containers for commercial purposes.
