Abstract (en)
[origin: WO9622425A1] A ski run maintenance tool having a front-end moldboard and used to work and regenerate ski runs is improved to enable hard ski pistes to be worked in the simplest possible way. This is accomplished by equipping the lower back side of the moldboard (2) with rotatable renovator teeth (11) which can be pivoted through a setting device (13) from a ready position into a working position in which they cut into the base layer of the ski run.
