Abstract (en)
[origin: WO9622608A1] Disclosed is a device and process for producing a coil arrangement (21), with a matrix support (11), a winding matrix (12) to hold the wound wire and at least two holding devices (13, 14) on the matrix support (11) to hold the end regions (26, 27) of the winding wire, the winding matrix (12) having a common axis of rotation (23) with the matrix support (11), and the holding devices (13, 14) being arranged at the peripheral edge of the matrix support in such a way that the winding wire, played out by a wire guide (24) over the peripheral edge in the direction of the axis of rotation, is passed through the holding devices and held in them.
