Abstract (en)

[origin: EP0805024A2] The machine has several round templates (4) which are synchronised w.r.t. their relative revolution rate. They are selectively raised from their print position and lowered onto the items to be printed and have individual rotational drives (5). The templates each have an individual lifting drive (16) for raising and lowering the individual round templates. The lifting drives can be actuated individually and incrementally wrt. each other by a programmable controller.
