Abstract (en)

A precision-stitch sewing machine (1) capable of advantageously applying a tubular welt (2) to an edge (3) of a knitted or woven fabric or the like along a predetermined sewing line (X-X) includes a sewing area (15), a support plate (13) for supporting the tubular welt (2) in the sewing area (15), entrainment means (8) for the tubular welt (2), these entrainment means (8) being positioned downstream of the sewing area (15) with reference to the direction of advance of the tubular welt (2) along the sewing line (X-X) and a folding unit (9) that includes a fork component (19) over which the tubular welt (2) is fitted in order to be opened up in a direction (Z-Z) approximately perpendicular to the support plate (13) as it advances and deflecting means (31) for folding the opened tubular welt (2) around the edge (3). <IMAGE>
