Abstract (en)
The clamp (1,30) comprises a base plate with at least one opening for a joint clamp with hook components (23,50,51). The base plate is fixable under the construction. Positive engagement is achieved by at least one support surface (22) on the joint clamp. The joint clamp has an arm with a second hook component (21), which is suspendable in an opening in the base plate. The first hook component (23) engages around an edge (2b) of the base plate. The arm completely or partly engages behind the base plate. Positive engagement is achieved by at least one support component (40) on the base plate. The joint clamp is a hat profile, which can be placed onto the support component.

Abstract (de)
Die Erfindung betrifft eine Fassadenklammer mit mindestens einem Hakenelement zum Einhängen von Fassadenplatten, die auf einer Unterkonstruktion befestigbar ist. Die erfindungsgemäße Fassadenklammer ist zweiteilig ausgeführt mit einer Grundplatte (2, 31) und mindestens einer Fugenklammer (15, 45). Die Fugenklammer (15, 45) wird formschlüssig in die Grundplatte (2, 31) eingesteckt oder eingehängt. <IMAGE>
