Abstract (en)
[origin: EP0805255A1] The fire door comprises a door panel with all-round covering and a frame forming a stop for the covering with its outside top and sides. When viewed in the horizontal projection, between the lower covering (18) and the lower frame section (3c) a vertical clearance (b) is provided. The vertical distance (d) between the lower frame section (3c) and the frame section wall (32c,23c) opposite to the upper door rabbet is greater than the complete height of the door panel. An additional frame part (12) is provided, which from below can be applied against the upper frame section and in the applied position reduces the distance (d). The frame part can be fixed releasably or permanently in the upper area of the frame by means of screws.
