Abstract (en)
[origin: EP0805256A2] The seal comprises a closed seal head (11) of soft rubber material with closed pores. The sealing head is arched and the sealing zone and pressure surface on the arch frame, which evolves (15) on both sides via relatively large rounding radii into the side wall parts (16) of the sealing head. The straight-line area (14), which locates parallel to the counter sealing surface on a check is relatively small. The transition areas (15) have relatively large rounding radii. The extension of the narrow surface (14) is in the range of 1 mm.
