Abstract (en)
[origin: EP0805321A1] The device has an inner chamber, closed by a door or lid and with at least partially cooled surfaces which are cooled by an intermittently operating cooling device. The inner chamber is connected via a connecting aperture to the ambient atmosphere, whereby the air exchanged via the aperture can be adjusted to a desired degree of dryness. A regeneratable drying agent (26) is arranged in the connecting aperture (24).
